

E2guardian i kurmak için bunları kullanabilirsiniz :

```
pkg update
```

```
pkg upgrade
```

```
cd /root/
```

```
pkg install git cmake gmake gcc openssl automake autoconf libtool
```

```
pkg install e2guardian
```

```
git clone https://github.com/e2guardian/e2guardian.git
```

```
cd e2guardian
```

```
./autogen.sh
```

```
./configure --with-logdir=/var/log --with-piddir=/var/run --disable-avastd --enable-clamd --disable-icap --disable-kavd --enable-sslmitm --prefix=/usr/local --localstatedir=/var --mandir=/usr/local/man --disable-silent-rules --infodir=/usr/local/share/info/ --build=amd64-portbld-freebsd14.0 --host=amd64-portbld-freebsd14.0 --sysconfdir=/usr/local/etc/e2guardian CXX=c++ CXXFLAGS="-O2 -pipe -fstack-protector-strong -fno-strict-aliasing -std=c++11" LDFLAGS="-fstack-protector-strong -L/usr/local/lib" LIBS="-lssl -lcrypto" CPPFLAGS="-I/usr/local/include" CC=cc CFLAGS="-O2 -pipe -fstack-protector-strong -fno-strict-aliasing" CPP=cpp PKG_CONFIG=PKG_CONFIG PKG_CONFIG_LIBDIR="/root/pfSense/FreeBSD-ports/www/e2guardian/work/.PKG_CONFIG:/usr/local/libdata/pkgconfig:/usr/local/share/pkgconfig:/usr/libdata/pkgconfig" build_alias=amd64-portbld-freebsd14.0 host_alias=amd64-portbld-freebsd14.0
```

```
gmake
```

```
gmake install
```

//Kontrol amaçlı olarak bunlar yapılabilir

/usr/local/sbin/e2guardian -v

/usr/local/sbin/e2guardian -d -c /usr/local/etc/e2guardian/e2guardian.conf

ps x #çalıştığını kontrol eder

/usr/local/sbin/e2guardian -Q -c /usr/local/etc/e2guardian/e2guardian.conf
